DATE MAILED: 06/30/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/982,070

Applicant(s)

JAHNKE, JOERG

Examiner

Kenneth Tang

Art Unit

2195

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 February 2002.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-64 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-64 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 17 October 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-64 are presented for examination.

Specification

2. Applicant is required to update the Cross-Reference to Related Applications section of the Specification with the appropriate patent numbers for any applications that have been issued.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 1-64 are directed to method steps and system which can be practiced mentally in conjunction with pen and paper, therefore they are directed to non-statutory subject matter. Specifically, as claimed, it is uncertain what performs each of the claimed method steps because it is not tangible. The examiner suggests applicant to change "method" to "computer implemented methods" in the preamble to overcome the outstanding 35 U.S.C. 101 rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2195

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-64 are rejected under 35 U.S.C. 103(a) as being unpatentable by Bowman-Amuah (US 6,842,906 B1) in view of Baker et al. (hereinafter Baker) (US 6,611,498 B1).

5. As to claim 1, Bowman-Amuah teaches a method in a data processing system for providing resources adapted to at least one of a plurality of user environments (dictionary pattern environment, etc.) (*col. 4, lines 55-58, col. 38, lines 60-67 through col. 39, lines 1-10*), the method comprising the steps of:

initiating execution (operation) of a program, the program having a session object and a resource identifier that is associated with a plurality of resource data stored in the session object (*col. 283, lines 48-64*); and while the program is executing, determining from the session object which of the plurality of user environments the program is executing in (done by the unique identity of identifier) (*col. 283, lines 48-67, col. 284, lines 1-10*); and

6. Bowman-Amuah teaches identifying which of the resource data is suitable for the determined user environment because the identifier identifies what is suitable. Bowman-Amuah fails to explicitly teach that the determination of the user environment is done by both the resource identifier and the determined user environment. However, Baker teaches a data processing system that adapts to a plurality of user environments based on environment variables, identifiers, languages (such as English, French, etc.), and by geographical location (*col. 3, lines 33-37, col. 14, lines 42-53, col. 16, lines 25-42*). It would have been obvious to one of ordinary skill in the art at the time the invention was made to include the feature of the determination of the user environment is done by both the resource identifier and the determined

Art Unit: 2195

user environment to Bowman-Amuah's data processing system, using identifiers addresses and objects to determine various types of services because this would extend the capabilities to an international level with people of many different languages (*col. 3, lines 33-37*).

7. As to claim 2, Bowman-Amuah teaches wherein the determined user environment identifies a location of a user of the program (location of the global addresses) (see Abstract). Baker also teaches identifying by a geographical location (*col. 3, lines 33-37, col. 14, lines 42-53, col. 16, lines 25-42*).

8. As to claim 3, Baker teaches wherein the determined user environment identifies a language (such as English, French, etc.) of a user of the program (*col. 3, lines 33-37, col. 14, lines 42-53, col. 16, lines 25-42*).

9. As to claim 4, it is rejected for the same reasons as stated in the rejection of claim 1. In addition, the broadest reasonable interpretation of the received resource data is satisfied in Bowman-Amuah by its object (*col. 283, lines 48-67, col. 284, lines 1-10*) or in Baker's environment variables (*col. 3, lines 33-37, col. 14, lines 42-53, col. 16, lines 25-42*).

10. As to claim 5, Bowman-Amuah teaches wherein the step of identifying which of the resource data is suitable comprises: loading a lookup object for linking the resource identifier with the resource data suitable for the determined user environment; and obtaining the suitable

Art Unit: 2195

resource data from the lookup object by using the resource identifier and the determined user environment (*col. 192, lines 13-28*).

11. As to claim 6, Bowman-Amuah teaches wherein a number of users are using the data processing system; and wherein at least one lookup object is loaded for each user (*col. 140, lines 49-67 through col. 141, lines 1-12*).

12. As to claim 7, Bowman-Amuah teaches wherein a number of users are using the data processing system; and wherein at least one lookup object is loaded for a plurality of users (*col. 140, lines 49-67 through col. 141, lines 1-12*).

13. As to claim 8, Bowman-Amuah teaches wherein the resource data comprises: step of obtaining the suitable generating a string identifier comprising the resource identifier and the user environment; and obtaining the suitable resource data using the generated string identifier, wherein the lookup object includes a link between the string identifier and the suitable resource data (*col. 283, lines 65-67 through col. 284, lines 1-10 and lines 48-55*).

14. As to claim 9, Bowman-Amuah teaches wherein the step of obtaining the suitable resource data comprises: invoking a dictionary function to obtain one of a plurality of lookup objects corresponding to the determined user environment and that link the resource identifier with the suitable resource data (*dictionary, Fig. 58, 62, or 63*).

Art Unit: 2195

15. As to claim 10, it is rejected for the same reasons as stated in the rejection of claim 1.

16. As to claims 11-19, they are rejected for the same reasons as stated in the rejection of claims 1-9.

17. As to claim 20, it is rejected for the same reasons as stated in the rejection of claim 1.

18. As to claim 21, it is rejected for the same reasons as stated in the rejection of claim 1. In addition, it is inherent that the data processing computer system contains a processing unit (CPU) and memory.

19. As to claim 22, it is rejected for the same reasons as stated in the rejection of claim 4.

20. As to claim 23, Bowman-Amuah teaches wherein the resource data comprise a string of at least one character (*col. 283, lines 65-67 through col. 284, lines 1-10 and lines 48-55*).

21. As to claim 24, Bowman-Amuah teaches wherein the resource data comprise a resource function including rules for character representation (*col. 283, lines 65-67 through col. 284, lines 1-10 and lines 48-55*).

22. As to claim 25, it is rejected for the same reasons as stated in the rejection of claim 2.

Art Unit: 2195

23. As to claim 26, it is rejected for the same reasons as stated in the rejection of claim 3.

24. As to claim 27, it is rejected for the same reasons as stated in the rejection of claim 5.

25. As to claim 28, it is rejected for the same reasons as stated in the rejection of claim 1. It is inherent that there are components (parts) that perform the limitations of claim 1.

26. As to claim 29, Bowman-Amuah teaches wherein the lookup component generates a string identifier comprising the resource identifier and the user environment, and generates the suitable resource data using the generated string identifier (*col. 283, lines 65-67 through col. 284, lines 1-10 and lines 48-55*).

27. As to claim 30, it is rejected for the same reasons as stated in the rejection of claim 9.

28. As to claim 31, it is rejected for the same reasons as stated in the rejection of claim 1.

29. As to claim 32, it is rejected for the same reasons as stated in the rejection of claim 21. In addition, Bowman-Amuah teaches the first storage area and plurality of second storage areas (*Fig. 10, 1000, 1020, etc.*).

30. As to claims 33-41, they are rejected for the same reasons as stated in the rejection of claims 1-9.

31. As to claim 42, it is rejected for the same reasons as stated in the rejection of claim 1.
32. As to claims 43-51, they are rejected for the same reasons as stated in the rejection of claims 1-9.
33. As to claim 52, it is rejected for the same reasons as stated in the rejection of claim 1.
34. As to claims 53-62, they are rejected for the same reasons as stated in the rejection of claims 21-30.
35. As to claim 63, it is rejected for the same reasons as stated in the rejection of claim 1.
36. As to claim 64, it is rejected for the same reasons as stated in the rejection of claim 21.

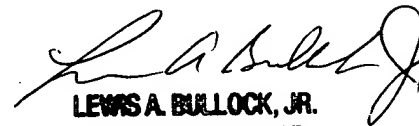

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth Tang whose telephone number is (571) 272-3772. The examiner can normally be reached on 8:30AM - 6:00PM, Every other Friday off.

Art Unit: 2195

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng-Ai An can be reached on (571) 272-3756. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
